ABSTRACT OF THE DISCLOSURE

A busbar system having an assembly unit for receiving a plurality of conductor busbars in electrically insulating busbar supports, and at least one connecting or appliance adapter which includes a receiving bridge for receiving terminals or appliances, and is embodied to electrically connect the same to the conductor busbars. The system of this invention has a simple structure, favoring the operation of the system because the assembly unit includes holding sections located on lateral, parallel longitudinal edge sections, and at least one adapter has a first fixing section and a second fixing section on the two narrow end sections thereof, and the fixing sections are adapted to the associated edge sections and have holding elements which co-operate with the holding sections for fixing the adapter.
